(1) Pre- and Post Operative Management of Trauma and Orthopaedic Patients (Ward Based Management) -

(1) Pre- and Post Operative Management of Trauma and Orthopaedic Patients (Ward Based Management) by Fracture School 7,217 views 2 years ago 40 minutes - Course 2, Session **1**,: Ward Based Management of Trauma Patients.

Intro

Objectives

Introduction to Trauma \u0026 Orthopaedics

How do Trauma Patients get to the Ward

Where to find the Plan for the Patient

Common Admissions

Pre-Operative Care- Fasting

Pre-Operative Care - Medical Tests

Pre-Operative Care - Paperwork

Early Post Operative Care - Scenario 1

Management- Hypovolaemia

Early Post Operative Care - Scenario 2

Management- Opioid Toxicity

Early Post Operative Care - Scenario 3

Management- Heart Attack

Early Post Operative Care - Scenario 4

Management- Anaphylaxis

Later Complications Post Operatively

Post Operative Plans

Chief of Orthopaedic Trauma: Dr. Samir Mehta - Chief of Orthopaedic Trauma: Dr. Samir Mehta by Penn Medicine 18,263 views 4 years ago 2 minutes, 20 seconds - Samir Mehta, MD is the Chief of **Orthopaedic Trauma**, at Penn Medicine. Dr Samir Mehta is a fellowship-trained orthopaedic ...

Orthopedic Trauma ; general principles: 1 - Orthopedic Trauma ; general principles: 1 by Orthopedic Board Abdelgawad 11,214 views 4 years ago 24 minutes - This is the first lecture in the section of the general aspects of the **trauma**, chapter. It describes the two plate system (locked and ...

Indication for locked plating: Osteoporotic bone and metaphyseal fracture. Locked plate system is best used in comminuted metaphyseal fractures especially in osteoporotic bone.

Non locked plate construct: Act by friction between the plate and bone (plate-to-bone compression). The screw pulls the bone towards the plate. Can help in obtaining reduction (act as a reduction tool). Mode of failure: sequential failure of the screws

Neutralization: the fracture is fixed with las screw providing compression , then the plate is applied to provide neutralization for shear, bending and rotational forces.

Bridging plate: The plate is used to fix the proximal and distal fragments spanning the injury zone with indirect reduction of the fracture alignment, length and rotation . The biology helping fracture healing fracture hematoma is left intact (hence called biological fixation) Bridge plating is mainly used in cases of comminution to avoid stripping of the fragments

Clinical: Orthopaedic Surgery 1 - Clinical: Orthopaedic Surgery 1 by The Surgical Academy 500 views 1 year ago 36 minutes - Orthopaedic Surgery, tutorial covering basic fractures, paediatric **orthopaedics**, and lower limb injuries Teaching delivered by: Dr ...
