Open the front cover of the printer

Remove the 4 toner cartridges

Remove the waste collector unit

Remove the drum unit

On this side of the drum unit remove the e-ring

Slide the drum metal axle

damaging the contact

Remove the old drum

Remove the charge roller

It's not necessary to change or remove the wiper blade

Clean out all the remaining toner from the cartridge

It would be better to use a toner workstation

You can also use a toner vacuum

Do not breathe the toner dust

Be careful not to damage the recovery blade

Clean the rod lens array

Clean the charge roller with water

The charge roller places the initial charge on the drum

Reinstall the charge roller

Lubricate the drum with toner or the wiper blade may damage it

Remember: the drum is light sensitive.

Install the drum axle from the drum gear side

rotate the drum by the gear in the proper direction

Install the e-ring

The resistor is a page counter

with a screwdriver push on the clip

To cancel the error message and reset the counter

you have to replace this resistor

Often, inside the drum chip there are 2 components

the brown is a normal 100 k resistor

Remove the old resistor

Cut the new resistor to the appropriate size and solder

Then put the assembly back to the drum unit

For any problem with the cartridge, here you'll find a troubleshooting guide
